Application Number 10/811,086

**Amendments to the Specification**

Please replace the paragraph beginning at page 10, line 24, with the following rewritten paragraph:

Desirably, all portions of finger 1023 except the contact pad 104 are formed of a single sheet of material and thus finger 102, with the exception of contact pad 104, is of a monolithic one-piece construction. For example, finger 102 may be formed of an electrically conductive metal such as a copper alloy. Contact pad 104 may be formed, for example, of a copper alloy or a nickel-copper alloy and soldered, brazed or otherwise secured to distal end 144 of the body 140. The exemplary contact pad 104 in Figs. 4 and 6A is a right cylinder having a circular cross-section with a flat circular contact surface. The contact pad 104 of these figures is a solid member having curved wall surfaces facing the directions of sliding of the contact pad on the associated annulus.
